Billet Aluminum accessories, LED's, Stainless Steel trim, roof rack, skid plate, brush guards, step bars by Real Wheels
Over \$175k Invested

So how do you make the Ultimate go-anywhere truck truly go anywhere, and still look good while doing it? How 'bout first throwing on a Fab Tech 6.5" lift kit, adding a rubber track conversion from Mattracks Inc, and then throwing on over 400 pieces of shine and sparkle.

That's just what the project team at Real Wheels did when they were creating the ultimate vehicle to display their line of stainless steel and billet accessories for Hummers.

Valued at over \$175k, the Real Wheels project Hummer is capable of plowing through snow, mud, swamp and sand and still picking up the groceries in attention getting style.

The "Get Real" Fantasy Hummer was unveiled at the Real Wheels 2003 SEMA show booth in Vegas, featuring products from over 15 different manufacturers along with the entire H2 line adorned everywhere on the truck. Cosmetic upgrades were not the only alterations planned for the H2. The vehicle went through numerous performance upgrades as well, including everything from new headers to an upgraded steering unit.

But the most eye-catching item has to

be the all-terrain tracks that give the Hummer that extra ability to travel to the most extreme locations. The Mattracks Inc all-terrain track conversion installs in less than an hour, providing extra mobility in harsh conditions that would even stop the mighty Hummers. And they are even operational on the pavement with a maximum speed of around 60mph. That's if you can ever get moving from all the people stopping to ask questions.

Real Wheels manufactures stainless steel and billet aftermarket accessories for both H1's and H2's. Many of their products are available at Hummer dealers or visit them online at

www.realwheelsacc.com (H2 accessories)
